# HEMIL KEVADIYA

Unity Game Developer

hkevadiya1104@gmail.com +(91) 8200131389 hemil-kevadiya

## PROFILE

Unity Game Developer specializing in **mobile and casual games**, with experience across gameplay systems, UI, performance optimization, debugging, and technical problem-solving. Strong focus on building **efficient, maintainable systems**, improving game performance. Experienced with **C#, Shader Graph, DOTween, mobile rendering optimization, analytics, advertising, and third-party SDK integration**, with a focus on delivering polished and responsive player experiences.

## PROFESSIONAL EXPERIENCE

**BooBoo Games,** *Unity Game Developer* **02/2025 – Present**

- Developed and optimized multiple mobile games across rendering-heavy, physics-driven, simulation, idle/merge, and casual gameplay genres, including **Tile Jumper, Flick Football, Idle Zen Merge, Gold Merge Miners, Planet Miner, Dot Blaster,** and more.
- Took features and gameplay systems through **implementation, debugging, optimization, and final polish**, working independently to identify and resolve technical issues throughout development.
- Diagnosed and fixed **gameplay, rendering, UI, and performance related bugs** across multiple projects, improving stability and overall player experience.
- Reduced draw calls by **~60%** in rendering-heavy projects through GPU instancing, batching, mesh optimization, and vertex-count reduction.
- Designed **custom mobile-optimized shaders using texture arrays** to consolidate multiple material variants into a single rendering setup, significantly reducing draw calls.
- Improved CPU and memory performance through profiling, garbage reduction, optimized update loops, and more efficient gameplay and rendering workflows.
- Created **custom Unity Editor tools and development workflows** to automate repetitive tasks, reduce manual work, and accelerate game development and content production.
- Built reusable systems and tools that improved **iteration speed, debugging, and maintainability** across projects.
- Implemented and refined **UI, animations, particle systems, and visual effects**, balancing visual polish with the performance constraints of mobile devices.
- Maintained clean, modular, and reusable **C# architecture**, enabling faster iteration and easier debugging across multiple game projects.

**Valora Infotech,** *Unity Game Developer* **10/2024 – 01/2025**

- Developed multiple mobile games, contributing to **gameplay systems, UI architecture, and scalable progression mechanics** across titles including Animal Merge and FoodVenture.
- Built complete gameplay and UI systems for **Animal Merge** and implemented core gameplay systems for **FoodVenture**, with a focus on clean, modular, and performance-friendly code.

**Smash Game Studios,** *Unity Game Developer Intern* **06/2024 – 09/2024**

- Developed games across **Action, Adventure, and Puzzle** genres while debugging and analyzing large existing codebases to improve stability and code quality.

- Contributed to **Puzzle Dazzle (Steam)** by refactoring core systems, optimizing CPU-intensive code and game logic, and implementing system-level improvements to enhance performance and stability on low-end devices.
- **Game Link on Steam -** Puzzle Dazzle

## PERSONAL PROJECTS

**Blobbu's Adventures: Hashi** **06/2026 – 08/2026**

- **Developed and shipped a complete puzzle game independently**, handling gameplay systems, UI, level progression, polish, optimization, and release preparation.
- Created a **custom puzzle solver and level-generation workflow** to validate puzzles and organize 150 levels into a structured difficulty curve and progression.
- Built custom **Unity Editor tools and workflows** to streamline puzzle creation, validation, and repetitive development tasks.
- Tested the game on **CrazyGames**, using player analytics to identify onboarding friction and iteratively improve the tutorial and early-game experience.
- Gained hands-on experience with **Google Play publishing, AdMob, GameAnalytics, monetization, and platform-specific requirements** while taking the game through release.
- **Google Play Link -** Blobbu's Adventures: Hashi

**Blobbu Restores,** *In Progress* **08/2026 – Present**

- Developing a mobile/web game while iterating on **gameplay systems, progression, and in-game economy**, using playtesting to balance rewards, pacing, and player progression.
- Testing **fun validation and iterative playtesting** to identify friction points, evaluate core gameplay loops, and refine mechanics based on player experience.
- Applying lessons from previous projects to improve **game design, balancing, onboarding, and overall player retention** throughout development.

## EDUCATION

**B.Tech (IT),** *Charotar University of Science and Technology* **11/2020 – 05/2024**
CGPA: 9.22

## SKILLS

Unity (2D & 3D)

C# & Object-Oriented Programming

Gameplay Programming

Mobile Game Development

Performance Optimization

Rendering & Shaders

Unity Editor Tools + Workflow Automation

Ads & In-App Purchases (IAP) Integration

Low-End Device Optimization & Platform Constraints

Debugging & Profiling

Clean, Modular & Scalable Code Architecture
